

CARING FOR YOUR VEHICLE WRAP AND GRAPHICS

Caring for your vehicle wrap is very important. To keep your investment looking great we offer the following tips & suggestions:

WASHING

Keep your vehicle clean! Hand washing your vehicle regularly with a soft, clean cloth or sponge is ideal. We recommend rinsing off as much dirt and grit as possible with a spray of water and using a wet, non-abrasive detergent.

Never use a high pressure sprayer on the wrap!

The sprayer will likely blow the material off or at the very least cause damage to the material. Also, never take your vehicle through an automatic car wash. We strongly recommend **waiting 7 days** before cleaning your wrap for the first time.

Unsealed Roads

Avoid driving on unsealed roads as the flying debris will result in minute stone chips which then begin the degradation process of the vinyl wrap and hence shorten the life of the wrap.

STORAGE

Try to park your vehicle in a garage or undercover whenever possible as vinyl wrap films (just like paint) are degraded by prolonged exposure to sun and atmospheric pollutants, particularly on the horizontal surfaces such as the bonnet, boot lid and roof.

BOATS

Vinyl films are not designed to be permanently submerged in water, fresh or salt. We recommend cleaning boat wraps with fresh water after each use. We recommend waiting 7 days before taking your boat out on the water for the first time.

Do not use high pressure sprayers, rough scrubbing or abrasive tools as these will scratch the vinyl film.

If your wrap gets a deep scratch, tear or begins lifting, it must be brought back into the Exhibitionist immediately for repairs to avoid further damage to the wrap.

FAILURE TO COMPLY WITH THESE PROCEDURES WILL RESULT IN VOID OF WARRANTY

I have read and understand the wrap care procedures,

Signature _____ Date _____

Name _____

NOTES _____

What products should I avoid using when cleaning my wrap?

- Solvents
- Oil based cleaners
- Degreaser
- Orange / citrus based cleaners
- Any household cleaners

How do I clean bird droppings, tree sap, and other difficult stains?

Difficult contaminants such as bug splatter, bird droppings, tree sap and similar need to be softened by soaking them for several minutes with very hot, soapy water. Rinse thoroughly and dry. If further cleaning is needed we recommend bringing the wrap in to us.

Fuel spills should always be wiped off, washed, rinsed and dried as soon as possible to avoid damage to the vinyl.

What do I do if my wrap is peeling, popping or bubbling?

If your wrap experiences any peeling or popping in the first week after being installed, it should be brought back in immediately.

Bubbles and some forms of popping can be resolved but if neglected for over a week, the job would have to be re-done and warranty can not be guaranteed.

Do not attempt to clean or fix your wrap if it is popping or peeling!
